Project Timeline

Latar Belakang

Why are we making this?

Kesalahan manusia dalam memilah sampah sering kali menghambat proses pengolahan limbah.

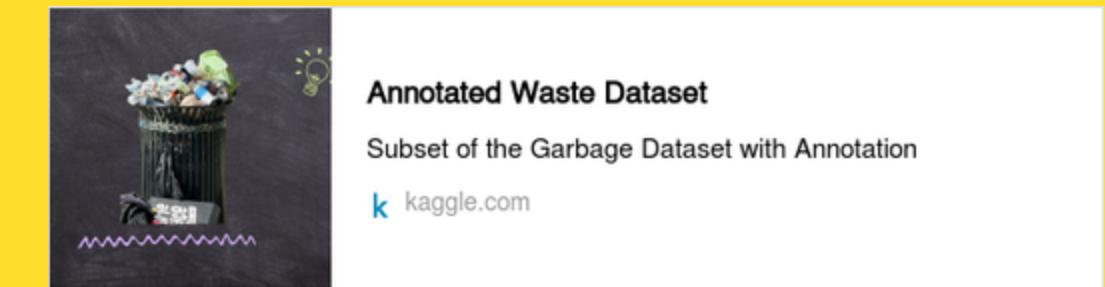

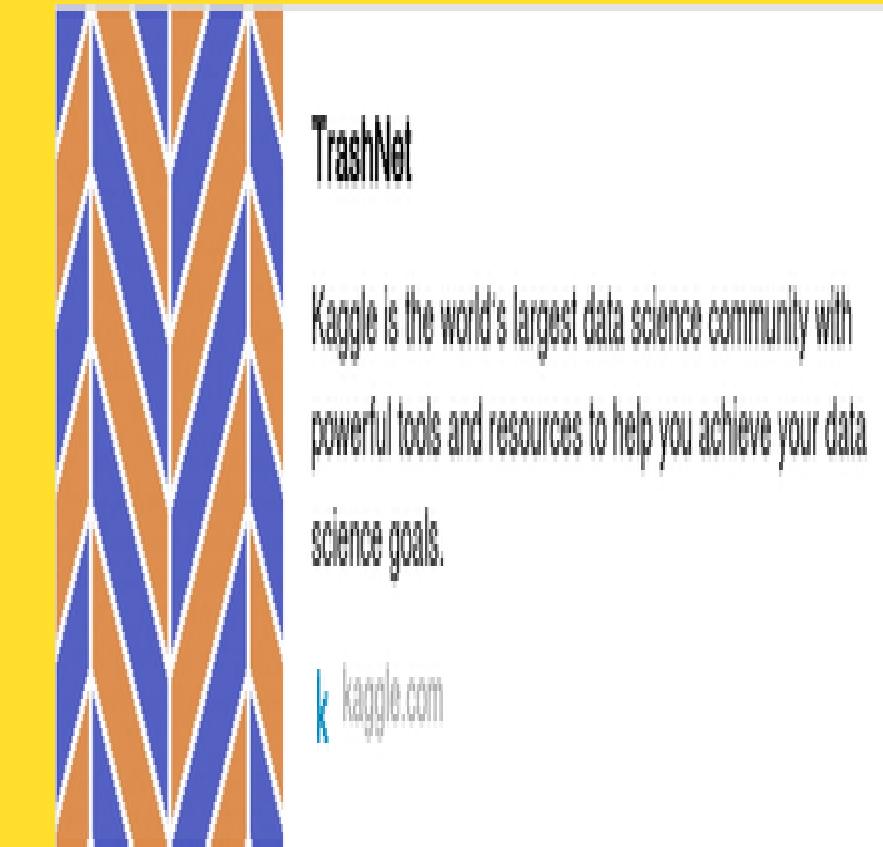

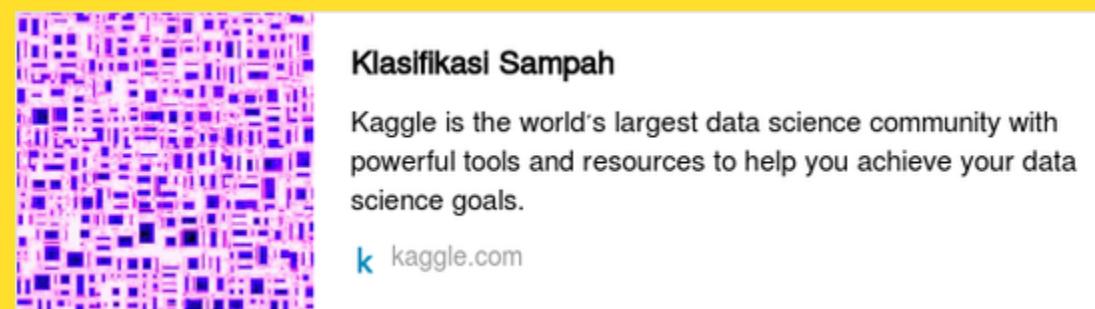

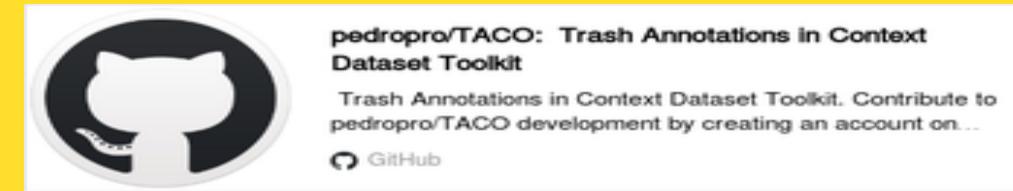

Memanfaatkan kecepatan dan akurasi arsitektur YOLO (You Only Look Once), sistem ini mampu mendeteksi dan mengklasifikasikan jenis sampah seketika, sehingga sampah dapat disortir secara otomatis tanpa intervensi manusia.

Dataset

Garbage Classification V2

Total Images: 20,212

Total Classes: 10

Class List

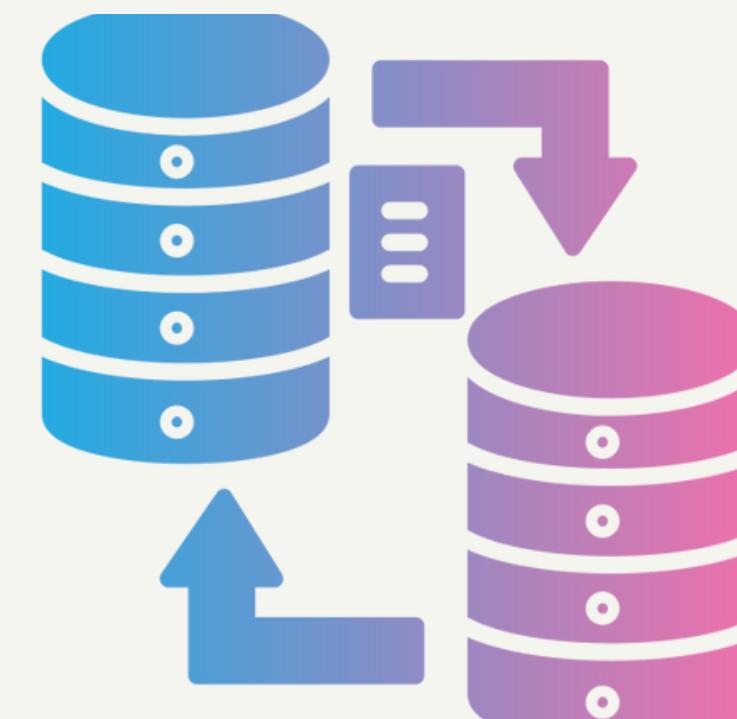

Battery, Biological, Cardboard,
Clothes, Glass, Metal, Paper,
Plastic, Shoes, Trash.

— 06

Covers common household!

Additional Info

Dataset ini Non-Annotated
untuk Object Detection.

Preprocessing

Auto-Labeling

Creating “Fake” Bounding Boxes

For it to Be Acceptable to YOLO
Standard

Changing Images Size to
640x640

Model Training

Initial Approach: MobileNetv2Custom CNN
Second Approach, and final
one. **Pretrained Model**

We're Using Yolov8n & Yolov8s
